Via Electronic Mail and Hand Delivery

Building Inspector Mike McMahon
Town of Malone
Building Department
566 East Main Street
Malone, NY 12953

There is no such law in NY Public Service Law, §79, which is presumably what Attorney Afzali had in mind. By the way, this is a non-standard way to cite statutes; Attorney Afzali needs to preface the section with the name of the article statute.

Re: Building Permit Application - SBL 97.-1-

Dear Building Inspector McMahon,

On behalf of Liberty Utilities Corp. (St. Lawrence Gas) ("SLG") please see attached application and supporting materials for a building permit and if necessary, a certificate of occupancy / completion related to the construction of a pad site for public utility purposes.

Property Location:	367 County Route 51 (Creighton Road), Town of Malone
Tax Parcel Id.:	SBL 97.-1-45.200
Acreage:	2.3 acre; 10,900 sq. ft.
Zoning District:	Countryside (C) district.
Permitted Primary Uses:	Public utility facilities (§ 79-9 [A] [1] [b]) without special restrictions, other than specified minimum lot size, width, yard dimensions and set back
Min. lot size:	No minimum lot size for public utilities (§ 79-9 [C] [1] [b])
Min. front yard depth:	75 feet (§ 79-9 [D] [2])
Min. side/rear dimensions:	15 feet between any point on any structure (including a screening fence) and nearest boundary (§ 79-9 [E])
Minimum road frontage:	100 feet (§ 79-9 [F])

Project Description

Applicant seeks to construct a pad site for skid mounted natural-gas decompression equipment and related plumbing to be connected to the SLG gas transmission line. The purpose of the station is to aid in the transfer of gas into the transmission line. Applicant does not intend to erect any digesters, buildings, or other structures on the subject property. Rather, Applicant will undertake necessary site work to install a concrete piers as a foundation for skid mounted gas decompression equipment. The lot will be surfaced with gravel and remain pervious except for a 2,300 square foot area that will be paved and serve as the gas off-loading area. SLG has obtained coverage under the State Pollutant Discharge Elimination System Permit (SPDES GP 0-20-001), administered by New York State Department of Environmental Conservation (NYSDEC). All earthwork and concrete construction will be in accordance with Town of Malone bulk standards

for the applicable zoning district and use, and all applicable requirements under the 2020 NY Building Code, 2018 IBC, and Franklin County Ordinance.

Project History

Applicant previously conferred with the Town of Malone Building Department in June-July of 2022 regarding the project and submitted plans for a pre-application review on July 5, 2022. At that time, the Town Building Inspector advised applicant that no municipal permits or approvals would be required due to the nature of the project and that no new buildings were proposed for the site. As such, Applicant commenced the sitework and anticipates completing the project by the end of March 2023.

On March 8, 2023, the Town Attorney / Special Counsel (Ms. Bridget O'Toole) contacted Applicant's counsel to advise that the Town Building Department would require a building permit despite the Town's previous authorization to commence work without a permit. As such, Applicant submits¹ this cover letter and the following application materials:

- (1) Town of Malone Building Permit Application Form;
- (2) Drawings;
- (3) Parcel Map / Zoning Map;
- (4) Copy of the SPDES Notice of Intent; and
- (5) Application Fee (in an amount to be determined by the Building Department);

We look forward to collaborating with your office on a timely issuance of a permit. SLG representative Ryan Hayes (315-842-3618; Ryan.Hayes@LibertyUtilities.com) and I are available to answer any questions.

Sincerely,

Javid Afzali

ecc.

Town Clerk (*clerk@malonetown.com*)
B. O'Toole, Esq. (*bridget@zoglaw.com*)
R. Hayes (*Ryan.Hayes@LibertyUtilities.com*)

¹ Subject to Applicant's full reservation of rights.

New Construction

3. Select the predominant land use for both pre and post development conditions.**Pre-Development Existing Landuse**

Cultivated Land

Post-Development Future Land Use

Parking Lot

3a. If Single Family Subdivision was selected in question 3, enter the number of subdivision lots.

NONE PROVIDED

4. In accordance with the larger common plan of development or sale, enter the total project site acreage, the acreage to be disturbed and the future impervious area (acreage)within the disturbed area.

*** ROUND TO THE NEAREST TENTH OF AN ACRE. ***

Total Site Area (acres)

2.19

Total Area to be Disturbed (acres)

1.17

Existing Impervious Area to be Disturbed (acres)

0

Future Impervious Area Within Disturbed Area (acres)

0.60

5. Do you plan to disturb more than 5 acres of soil at any one time?

No

6. Indicate the percentage (%) of each Hydrologic Soil Group(HSG) at the site.

A (%)

0

B (%)

0

C (%)

0

D (%)

100

7. Is this a phased project?

No

8. Enter the planned start and end dates of the disturbance activities.

Start Date

8/1/2022

End Date

12/1/2022

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.

East Branch of Deer Creek

9a. Type of waterbody identified in question 9?

Stream/Creek Off Site

Other Waterbody Type Off Site Description

NONE PROVIDED

9b. If "wetland" was selected in 9A, how was the wetland identified?

NONE PROVIDED

10. Has the surface waterbody(ies in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001?

No

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001?

No

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters?

No

If No, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as D (provided the map unit name is inclusive of slopes greater than 25%), E or F on the USDA Soil Survey?

NONE PROVIDED

If Yes, what is the acreage to be disturbed?

NONE PROVIDED

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area?

No

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)?

No

16. What is the name of the municipality/entity that owns the separate storm sewer system?

NONE PROVIDED

17. Does any runoff from the site enter a sewer classified as a Combined Sewer?

No

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law?

No

19. Is this property owned by a state authority, state agency, federal government or local government?

No

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.)

No

Required SWPPP Components

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)?

Yes

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)?

Yes

If you answered No in question 22, skip question 23 and the Post-construction Criteria and Post-construction SMP Identification sections.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual?

Yes

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:

Erosion & Sediment Control Criteria

25. Has a construction sequence schedule for the planned management practices been prepared?

Yes

26. Select all of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural

Perimeter Dike/Swale

Sediment Basin

Silt Fence

Stabilized Construction Entrance

Temporary Swale

Biotechnical

Brush Matting

Vegetative Measures

Seeding

Temporary Swale

Topsoiling

Mulching

Permanent Structural

Rock Outlet Protection

Other

slope stabilization matting

Post-Construction Criteria

*** IMPORTANT: Completion of Questions 27-39 is not required if response to Question 22 is No.**

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

Locating Development in Less Sensitive Areas
Roadway Reduction

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).

All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout). (Acre-feet)

0.049

29. Post-construction SMP Identification

Use the Post-construction SMP Identification section to identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity that were used to reduce the Total WQv Required (#28).

Identify the SMPs to be used by providing the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use the Post-Construction SMP Identification section to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29. (acre-feet)

0.023

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28)?

No

If Yes, go to question 36. If No, go to question 32.

32. Provide the Minimum RRv required based on HSG. [Minimum RRv Required = (P) (0.95) (Ai) / 12, Ai=(s) (Aic)] (acre-feet)

0.0107

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?

Yes

If Yes, go to question 33.

Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.

If No, sizing criteria has not been met; therefore, NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

33. SMPs

Use the Post-construction SMP Identification section to identify the Standard SMPs and, if applicable, the Alternative SMPs to be used to treat the remaining total WQv (=Total WQv Required in #28 - Total RRv Provided in #30).

Also, provide the total impervious area that contributes runoff to each practice selected.

NOTE: Use the Post-construction SMP Identification section to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question #29. (acre-feet)

0.032

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a).

0.055

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)?

Yes

If Yes, go to question 36.

If No, sizing criteria has not been met; therefore, NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv required and provided or select waiver (#36a), if applicable.

CPv Required (acre-feet)

NONE PROVIDED

CPv Provided (acre-feet)

NONE PROVIDED

36a. The need to provide channel protection has been waived because:

NONE PROVIDED

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (#37a), if applicable.

Overbank Flood Control Criteria (Qp)

Pre-Development (CFS)

6.32

Post-Development (CFS)

3.96

Total Extreme Flood Control Criteria (Qf)

Pre-Development (CFS)

10.26

Post-Development (CFS)

6.96

37a. The need to meet the Qp and Qf criteria has been waived because:
NONE PROVIDED

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed?

Yes

If Yes, Identify the entity responsible for the long term Operation and Maintenance
Liberty Utilities (St. Lawrence Gas) Corp.

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). (See question #32a) This space can also be used for other pertinent project information.

The end users needs limited the type of stormwater SMPs that could be utilized.

Because a bioretention basin was proposed in 'D' Soils, the entire WQv could not be reduced, only 40%.

Post-Construction SMP Identification

Runoff Reduction (RR) Techniques, Standard Stormwater Management Practices (SMPs) and Alternative SMPs

Identify the Post-construction SMPs to be used by providing the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.
